## **ABSTRACT**

The present invention relates generally to mass spectrometry and the analysis of chemical samples, and more particularly to ion guides for use therein. The invention described herein comprises an improved method and apparatus for transporting ions from a first pressure region in a mass spectrometer to a second pressure region therein. More specifically, the present invention provides an improved stacked ring ion guide for more efficient use in mass spectrometry (particularly with ionization sources) to transport ions from a first pressure region to a second pressure region.
